

## A virtual library to help manage your images, and your image

Gain greater control of a limitless number of photo images using Imagespace™ by Innersync. A great resource for companies or any organization seeking maximum control of their photos, Imagespace is the web-based solution that makes it easy to store, catalog, find and share your digital assets. It brings all your photo and graphics sources together into one convenient location. In turn, you can distribute the images you want to the web content channels you designate using a handy set of tools found only in Imagespace. Automatically generate thumbnails, add notations and searchable keywords — even create countless custom lightboxes — to serve up easy access to your images. Imagespace leverages your digital assets and puts them — not you — to work.

### Imagespace features...

- **Web-based access to all hi-res and low-res images**
- **Searchable files using meta-data**
- **Lightboxes for sharing containers of images**
- **Easy integration with web site**
- **Simple user administration tools**

IMAGESPACE SCREEN SHOT: Search your Imagespace library using dates and custom or pre-determined keywords. You can further refine your search by searching within results for pinpoint image selection.

Simply powerful web experiences

# Find. Share. Imagine.

## Use Imagespace™ to help you organize and visualize all your photos.

From photographer to publisher, Imagespace streamlines how you organize, discover and distribute your images. It creates great efficiencies for any and all photo users throughout your company. One convenient web-based location and a set of friendly tools not only help you find and gather your images, but better control how they're used. Imagespace puts selected, approved images at the fingertips of your content providers, for more accurate, more timely and more creative depiction of your company's image.

### Seek and you shall find

Original hi-res files are loaded right onto the server using Imagespace's web-based tools. You create a batch name, then for each image you apply a limitless number of key words that will help you search according to the photo's attributes. These tags afford you and your users the ability to search and find just the images that you're looking for. Thumbnails are automatically generated. All the images are available in one shared library, with access easily controlled by the user administrator.

### Shedding some light on the creative process

Using Imagespace lightboxes, you can collaborate with other users by assembling images and comments into one content "container" that's easily shared. E-mail your lightbox via an automatically generated link to give your users choices or make creative suggestions. Designers and users in corporate communications, marketing, public relations, field sales and other departments will appreciate how their jobs are made easier with Imagespace.

### Manage your images, and your image

Maintain corporate publishing standards by using Imagespace to help you control the use of image content. Design integrity can be reinforced and preserved when you make available to your authors only the images you approve. "Push" the content that meets your strategic communications objectives. You can elevate your company's overall image by managing the flow and content of your photos and images.

### Get started...

To learn more about how Imagespace can help you gain maximum control of your photos, e-mail us at [imagespace@innersync.com](mailto:imagespace@innersync.com), call **513-333-0211** or go to [www.innersync.com/imagespace](http://www.innersync.com/imagespace).

### Imagespace features

#### Easily administer

Grant permissions for the people that will be using Imagespace. With simple tools, you designate who gets access to what images.

#### Search images

Using meta-data tags, you can set pre-determined key words, and you always have the option of applying newer, more relevant keywords to images to refine future search accuracy.

#### Improve user access to images

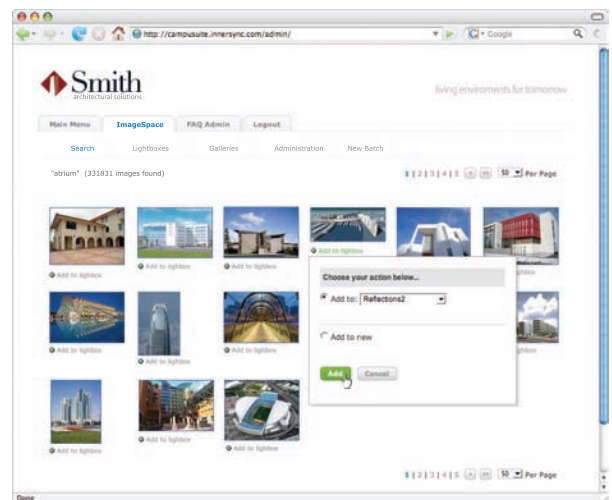

Allow designated user groups across many departments to put their hands on the images they need with one centralized, categorized, easily accessible web-based image repository.

#### Choose your image size

Search for images then simply download the original hi-res image, the web version, or a link that can be easily e-mailed or shared.

#### Create and collaborate

Assemble images to create lightboxes so you can share photos and comments that ultimately lead up to the final selection of published images.

IMAGESPACE SCREEN SHOT: Once you've searched and found the images that meet your criteria, you can assemble a lightbox, add comments, then share with anyone.
